

Cybersecurity Incident Report:

Network Traffic Analysis

Part 1: Provide a summary of the problem found in the DNS and ICMP traffic log.

The UDP protocol reveals that: **There was a failed attempt in the UDP Packet being delivered to port 53 of the DNS Server**

This is based on the results of the network analysis, which show that the ICMP echo reply returned the error message: **UDP Port 53 Unreachable**

The port noted in the error message is used for: **Traffic was received but destination port was unavailable**

The most likely issue is: **UDP Port 53 is unreachable or blocked**

Part 2: Explain your analysis of the data and provide at least one cause of the incident.

Time incident occurred: **1:24pm**

Explain how the IT team became aware of the incident: **Users couldn't access website/ website not loading properly.**

Explain the actions taken by the IT department to investigate the incident: **used tcp dump to examine network traffic and see packets sent from user computer to dns server to determine issue.**

Note key findings of the IT department's investigation (i.e., details related to the port affected, DNS server, etc.): **user computer sent dns request using udp to port 53 server 203.0.113.2 reported error from icmp as port 53 unreachable**

Note a likely cause of the incident: **UDP Port 53 was unavailable or blocked**
